

Challenge: Colors with Navigation

Description: Create a version of the Colors app (the app that displays a list of colors in a table view) that allows the user to select a color from the table view and segues to a view Controller that displays detail about the selection. The app is to use a navigation controller.

Purpose: The challenge provides experience with navigation controllers and segues.

Requirements:

Project Name: Colors with Navigation

Target Platform: iOS Single View Application

Language: Swift

Devices: Universal

This project is to be managed in a public GitHub repository. For the challenge assignment submit the URL for the repository.

The table view is to look like the following.

purple

brown

The detail view is to look like the following.

yellow

When the user taps on a row in the table view they are to be taken to the detail view. When the user taps on the back button < **Colors**) in the detail view, the view controller with the table view is to be displayed.

Submission

Submit the GitHub repository URL for the project.
